Internet Savvy Kids
South Africa

Digital Citizenship

Ages 5 - 11

Navigate the digital world safely and become internet savvy

About

Social Kids is an online safety training adventure, made up of 5 adventures, that can be taken with parents or via a supervised online class every afternoon. After each adventure children need to upload an activity that demonstrates that they have understood the lesson. They will earn digital badges for each adventure, ending with a global surfer badge, a print-at-home personalised certificate and picture frame. Parents can download a parent guide that will assist them in continuing the discussions and set up security measures to protect their child's privacy.

The 5 adventures consist of:

- **Being SMART online**
  Here we teach our adventurer what questions to ask and how to have a positive fingerprint online and how to balance their time between digital play and real play. This journey will cover the dos and don'ts of digital safety. Encouraging children to have open conversations with their parents or guardians about what they find online.
- **Kung Fu Fighting**
  We help children to identify a bully online, teaching them the skills to navigate and share their experiences to stop the behaviour as quickly as possible. Children will understand how to safeguard their private information and what to do if they are being mistreated online.
- **Truth or Dare**
  Codey will show children that not everything they find online is true, what they should look for before they trust anything online. How to tell a good story when they are connecting in person and how the internet and algorithms work.
- **I speak Digital**
  Codey will describe what online manners are, what certain messages and symbols on the internet mean and how to interpret them. Codey explains in detail how to play games safely and when to show your true colours or when not to!
- **Global Surfer**
  Codey ensures the brave adventurers can confidently connect with the world by reinforcing the main topics allowing them to surf safely. They understand the dangers that could be out there, and highlight the positives that our digital world has to offer.

What our parents say...

"Social Kids is a great resource to future proof your kids against online dangers. Not only does it educate them, it also provides parent guides to help set boundaries in place. I found the course useful because it opened up conversations with my son about online bullies and how he would handle them. Creating a safe family space (which Codey teaches us are people we can trust) is a good grounding for kids for that online world out there."
